EMPLOYMENT HISTORY

Jun 2022 — Present	Data Scientist, Elutions	Milwaukee, WI
	- Developed and deployed LightGBM and XGBoost models constructed to optimize industrial machine performance across several manufacturing clients. - Led end-to-end data science workflows, including data acquisition, exploratory data analysis (EDA), data cleansing, model development, and live deployment in production environments. - Developed reusable data science pipelines with ZenML to streamline data preprocessing, cleansing, and model construction, significantly reducing project turnaround time for new clients. - Conducted survival analysis on maintenance datasets to model machine asset lifecycles, providing data-driven recommendations for preventative maintenance scheduling.	
Jun 2021 — Jun 2022	Data Scientist (Intern), U.S. Geological Survey	La Crosse, WI
	- Analyzed demographic patterns of endangered mussel populations using supervised and unsupervised machine learning techniques, including Non-Metric Multidimensional Scaling (NMDS), Principal Component Analysis (PCA), and distance-based Redundancy Analysis (db-RDA). - Co-authored a peer-reviewed paper investigating the impact of distance/dissimilarity metrics on clustering, ordination, and canonical multivariate techniques on metabolomic datasets. - Conducted statistical consulting and model implementation to evaluate agreement statistics for invasive Silver Carp aging techniques using Linear Mixed Models in lme4.	
Sep 2019 — Dec 2021	Mathematical Tutor, University of Wisconsin La Crosse	La Crosse, WI
	- Provided tutoring support for collegiate-level mathematics courses, including Algebra, Calculus, and Linear Algebra, improving students' comprehension and performance. - Adapted to individual learning styles while ensuring concepts were effectively understood.	

EDUCATION

Jan 2020 — May 2021	Master of Science - Applied Statistics, University of Wisconsin La Crosse	La Crosse, WI
	Master's Project: Bayesian Hyperparameter Tuning in Classification of NBA Game Outcomes	
Sep 2016 — May 2020	Bachelor of Science - Statistics, University of Wisconsin La Crosse	La Crosse, WI

PROJECTS

NFL Game Prediction Dashboard

Constructed a model that predicts the outcome of games in the NFL. Built an interactive dashboard to visualize predictions, team data, statistics, and key game factors.

- Github:** <https://github.com/oliverjohnw/nfl-dashboard>

Spotify Song Recommender

Designed and implemented a music recommendation system that suggests similar songs based on user input from Spotify.

- Github:** <https://github.com/oliverjohnw/spotify-recommendations>
